## Calvert US Large-Cap Diversity Research Index Average Annual Returns (%)

	3 MOS	YTD	1 YR	3 YRS	5 YRS	SINCE INCPT 6/19/20
Calvert US Large-Cap Diversity Research Index <sup>1</sup>	7.61	-23.06	-23.06	—	—	9.18
Russell 1000 Index <sup>1</sup>	7.24	-19.13	-19.13	7.34	9.13	10.03

Performance of the Index does not reflect the deduction of fees and expenses that would typically be associated with an actual investment and does not represent the performance of the Calvert Fund that seeks to replicate the Index. Investors cannot invest directly in the Index. Performance less than or equal to one year is cumulative.

<sup>1</sup>Russell 1000® Index is an unmanaged index of 1,000 U.S. large-cap stocks. The Calvert US Large-Cap Diversity Research Index is composed of companies that operate their businesses in a manner that is consistent with the Calvert Principles for Responsible Investment and are selected from the universe of the 1,000 largest publicly traded U.S. companies by market cap. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the Fund.

<sup>2</sup>Expenses are based on the fund's current prospectus. Please see the Fund's prospectus for additional information.

The Advisor will make a contribution from its own resources, annually after the end of each calendar year, to certain diversity, equity and inclusion initiatives in an amount of 0.02% of the net annualized assets under management of Calvert US Large-Cap Diversity, Equity and Inclusion Index ETF.

An ESG investment strategy limits the types and number of investment opportunities available to the strategy, and, as a result, the strategy may underperform other funds that do not have an ESG focus. Companies selected for inclusion in a strategy may not exhibit positive or favorable ESG characteristics at all times and may shift into and out of favor depending on market and economic conditions. **See additional important risks on page 2.**

**RISK CONSIDERATIONS Diversification** does not eliminate risk of loss. There is no assurance that a portfolio will achieve its investment objective. Portfolios are subject to **market risk**, which is the possibility that the market values of securities owned by the portfolio will decline and that the value of portfolio shares may therefore be less than what you paid for them. Market values can change daily due to economic and other events (e.g. natural disasters, health crises, terrorism, conflicts and social unrest) that affect markets, countries, companies or governments. It is difficult to predict the timing, duration, and potential adverse effects (e.g. portfolio liquidity) of events. Accordingly, you can lose money investing in this portfolio. In general, **equities securities** values fluctuate in response to activities specific to a company. Investing primarily in **responsible investments** carries the risk that, under certain market conditions, the Portfolio may underperform portfolios that do not utilize a responsible investment strategy. An investment's ESG performance, or Calvert's assessment of such performance may change over time, which could cause the Portfolio to temporarily hold securities that do not comply with the Portfolio's responsible investment criteria. The value of the Portfolio may be particularly impacted by events that adversely affect the **information technology sector**, such as rapid changes in technology product cycles, product obsolescence, government regulation, and competition, and may fluctuate more than that of a portfolio that does not concentrate in companies in the technology sector. The Portfolio may engage in **securities lending** (lend its portfolio securities to broker-dealers and other institutional borrowers) to generate income. During the existence of a loan, the Portfolio will continue to receive the equivalent of the interest paid by the issuer, or all or a portion of the interest on investment of the collateral, if any. The Portfolio may pay lending fees to such borrowers. Upon return of the loaned securities, the Portfolio would be required to return the related collateral to the borrower and may be required to liquidate portfolio securities in order to do so. Please be aware that this portfolio may be subject to certain additional risks.

**Tracking error** risk refers to the risk that the Portfolio's performance may not match or correlate to that of the Index it attempts to track, either on a daily or aggregate basis, and may cause the performance to be less than expected. Because a representative sampling indexing strategy is utilized, a larger tracking error can be expected than if it used a replication indexing strategy. Tracking error may also occur because of other factors, including but not limited to, transaction costs and the holding of cash. **Index Related Risk.** The return may not track the return of the Index and therefore may not achieve its investment objective. In addition, the Portfolio can be expected to be less correlated with the return of the index. The Portfolio is managed using a **passive investment**

strategy and generally will not adjust its portfolio investments to attempt to take advantage of market opportunities or lessen the impact of a market decline or a decline in the performance of one or more issuers or for other reasons, which could negatively impact the portfolio than if the Portfolio employed an active strategy. **Authorized Participant Concentration Risk.** The Portfolio has a limited number of intermediaries that act as authorized participants and none of these authorized participants is or will be obligated to engage in creation or redemption transactions. As a result, shares may trade at a discount to net asset value ("NAV") and possibly face trading halts and/or delisting. **Concentration Risk.** The Portfolio may face greater risks if the Portfolio concentrates its investments in an industry or group of industries than if it were diversified broadly. **Trading Risk.** The market prices of Shares are expected to fluctuate, in some cases materially, in response to changes in the Portfolio's NAV, the intraday value of holdings, and supply and demand for Shares. The Adviser cannot predict whether Shares will trade above, below or at their NAV. Buying or selling Shares in the secondary market may require paying brokerage commissions or other charges imposed by brokers as determined by that broker. **New Fund Risk.** A new portfolio's performance may not represent how the portfolio is expected to or may perform in the long term. In addition, there is a limited operating history for investors to evaluate and the portfolio may not attract sufficient assets to achieve investment and trading efficiencies.
